

The ILW Performance Level 'd'/SIL2 series of Gefran are pressure transmitters for using in high temperature environment with IO-Link output.

The main characteristic of this series is the capability to read temperature of the media up to 315°C (600°F).

The constructive principle is based on the hydraulic transmission of the pressure.

The fluid-filled system assures the temperature stability.

This "Smart" transmitter with IO-Link output is ready for "Industry 4.0" requirements.

"ILW" is Gefran's series of high-temperature pressure sensors with filling fluid and digital output.

This new series ILW with "IO-Link" interface is a Smart device specifically designed to meet the requirements of "Industry 4.0" environment, with auxiliary information suitable to prevent machine downtime and thanks to the filling fluid solution it can withstand up to 315°C of process temperature.

In addition, with PLd and SIL2 approvals, the ILW series is the best solution for "functional safety" applications.

## SELF DIAGNOSTICS (for SIL/PL certified models only)

Below the conditions detected by the sensor self-diagnostics:

- Cut cable / device non connected / broken power supply, output <3.6 mA/0.25 V
- Pin detachment, output >20.6 mA/10.8 V
- Pressure above 200% of the span, output >20.6 mA/10.8 V
- Voltage monitor in case of overvoltage/undervoltage/voltage variation in the electronics, output <3.6 mA/0.25 V
- Program sequence error, output <3.6 mA/0.25 V
- Overtemperature on the electronics, output <3.6 mA/0.25 V
- Error on the primary element output or on the first amplification stage, output <3.6 mA/0.25 V

## OPTIONAL RELAY OUTPUT FOR EXCESS PRESSURE PROTECTION (for SIL/PL certified models only)

Safety relay characteristics:

- Activation threshold to be defined in the order code
- Rated carry current: 1A
- Rated voltage: 24Vdc  $\pm$  20%
- Switch accuracy: 2 x sensor accuracy
- Hysteresis: 2% FS

SUPPLY	OUTPUT	RELAY STATUS
OFF	-	OPEN
ON	< X%FS	CLOSED
ON	> X%FS	OPEN
ON	under range	OPEN
ON	over range	OPEN

## NAMUR COMPLIANCE (for SIL/PL certified models only)

The sensors are tested according to Namur NE21 recommendations.

The same compatibility is valid for the NE43 Namur recommendation with the following sensor behaviour in case of breakdown:

- Cut cable: breakdown information as the signal is <3.6 mA/0.25 V
  - Device not connected: breakdown information as the signal is <3.6 mA/0.25 V
  - Broken power-supply: breakdown information as the signal is <3.6 mA/0.25 V
- or in case of performance problems:
- most common failures on primary sensors: the signal goes to >20.6 mA/>10.8 V

Note: in all the remaining situations, the output signal is always included between 3.6 mA/0.25 V and 20.6 mA/10.8 V.

**Recommendation:** the error level set by the customer (e.g. maximum pressure value) has to be inside the nominal range

## AUTOZERO FUNCTION

The Autozero function is activated by IO-Link command.

All zero drift caused by temperature change on the tip can be removed by using this function.

This autozero procedure must be performed at zero pressure only, when the sensor is completely installed on the system.

See operating manual for complete Autozero Function explanation
